PROFESSIONAL SUMMARY

Backend-focused Software Engineer with over 3 years of experience in designing scalable RESTful APIs, distributed microservices, and secure authentication layers. Highly proficient in C# (.NET Core), Node.js, TypeScript, and React.js. Passionate about engineering enablement, improving developer experience through CI/CD automation (Docker, GitHub Actions), and optimizing database performance across SQL ecosystems. Proven ability to translate complex business requirements into robust, multi-tenant SaaS architectures.

WORK EXPERIENCE

JoulesLabs

Nov 2025 - Present

Software Engineer L-I

Dhaka, Bangladesh

- Designing and maintaining backend architecture for a large-scale, multi-tenant healthcare SaaS platform serving white-labeled iOS and Android apps.
- Building scalable and versioned RESTful APIs, ensuring high performance and secure handling of sensitive data compliant with HIPAA standards.
- Collaborating with cross-functional teams to integrate complex health provider network APIs and streamline data synchronization processes.
- Developing admin tools and CMS portals to empower internal operations and improve overall platform maintainability.

BIKIRAN

Feb 2023 - Oct 2025

Software Engineer (Promoted from Web Developer)

Khulna, Bangladesh

- Implemented high-performance backend services using C# (.NET Core), Node.js, and TypeScript, alongside extending core microservices.
- Developed core functionalities for a Multi-Tenant SaaS platform, including subscription lifecycles, role-based isolation, and license token signing.
- Built dynamic frontend interfaces using React.js and Next.js, integrating securely with backend REST APIs.
- Optimized complex database queries across PostgreSQL and MySQL, significantly improving API response times for reporting dashboards.

CORE ENGINEERING PROJECTS

BikPanel – Docker-Based CI/CD Panel

- Developed an internal developer tool (Engineering Enablement) to manage container lifecycles, environment variables, and build triggers.
- Created secure action authorization roles and log aggregation APIs using Node.js, Next.js, and PostgreSQL, reducing integration friction.

Enterprise SaaS Subscription & Licensing API

- Engineered a centralized, multi-tenant backend architecture handling subscriptions, secure license entitlements, and automated renewals.
- Designed robust data models using C# (.NET Core) and Node.js to ensure strict tenant isolation and high availability.

TECHNICAL SKILLS

Backend & Languages: C# (.NET Core), Node.js, TypeScript, JavaScript (ES6+), React.js

Databases: PostgreSQL, MySQL, MSSQL, Redis

API & Architecture: RESTful APIs, Microservices Architecture, Multi-Tenant SaaS, JWT Auth, RBAC

DevOps & Tools: Docker, Linux (Ubuntu), Git, GitHub Actions (CI/CD), Postman

EDUCATION

Khulna Polytechnic Institute

March 2023

Diploma in Engineering (Computer Science) - CGPA: 3.41/4.00

Khulna, Bangladesh
